

PRODUCT INFORMATION NOTICE

PIN No: LIT-72

Date: January 25, 2017

By: Joe Berry

Issue: Notification

Subject: Next-Gen II 3-22 HP condensing units

Russell introduces its new, Next-Gen II™ 3-22 HP air cooled condensing unit product brochure. Next-Gen II™ units represent a significant improvement over the legacy D-Series 3 to 22 HP models and are currently available for order from the factory.

These improved condensing units incorporate many strategic enhancements, standard features and available options. They are designed for use with low GWP refrigerants R407A, R407C, R407F, R448A, R449A, as well as with R404A. They are shown with capacities and specifications utilizing Copeland Discus™, Copeland Scroll™ and Bitzer semi-hermetic compressors.

The Next-Gen II™ product brochure RU-NG2-0117A is an extensive 40 page document that replaces both the legacy D-Series and D-Series scroll brochures.

The new literature piece will be added to the Russell website under the air cooled condenser section of both the products tab and the literature tab. Documentation for the legacy D-Series discus and scroll units will be moved to the "obsolete literature" link found at the bottom left corner of the Literature tab.

Catalog literature is available at the warehouse and can be ordered by utilizing the website order form found at this link: <https://russell.htpgusa.com/literature-request/>

ACTION:

Distribute this information to your Reps and customers as necessary. Please update your catalog with these new product brochures and retain this notice for future reference.
