Easily See When the Basket Needs Cleaning

LARGE STURDY BASKET

Longer Duration Between Cleanings

DURABLE MOTOR

Long-Lasting, Quiet Operation

- Energy Star certified
- Self-priming
- Programmable schedule
- RS485 Modbus enabled

About the Protégé VSP

The “VS” in our new Protégé VSP stands for “variable-speed”, denoting a high-performance, yet high-efficiency pump and is Energy Star certified making it the best choice for today’s energy and cost-conscious world.

The pump is the heart of your swimming pool’s circulation system, pushing water through the filter to remove debris or impurities. The VSP’s PMM (permanent-magnet motor) Technology allows the pump to achieve efficiency over single speed pumps. Single-speed pumps are either off, or consuming energy at 100% of their capacity. The VSP has 3 pre-set speeds, allowing a desired pump speed to be selected and only working as hard as is needed based on the conditions. It can lower or raise operating speed and flow rate as needed reducing overall energy consumption and cost.

The Complete Package

All of our Protégé Series products pair perfectly with our Raypak pool heaters. No matter what setup or fuel type you need we have the right heating solution.

- Gas heaters up to 150 MBTUH
- Heat Pump heaters up to 61 MBTUH
- Electric heaters up to 92 MBTUH

Complete your system with the Protégé Series.

The Protégé Series above ground pool pumps and filters keep your above ground pool clean and ready to enjoy. The series works perfectly in combination with our gas, heat pump and electric pool heaters. You can combine our Sand Filter (SF) with either the Above Ground Pump (AGP) or our Variable Speed Pump (VSP). For a complete ready to install system our Cartridge Filter Pump (CFP) or Sand Filter Pump (SFP) are the best choice.

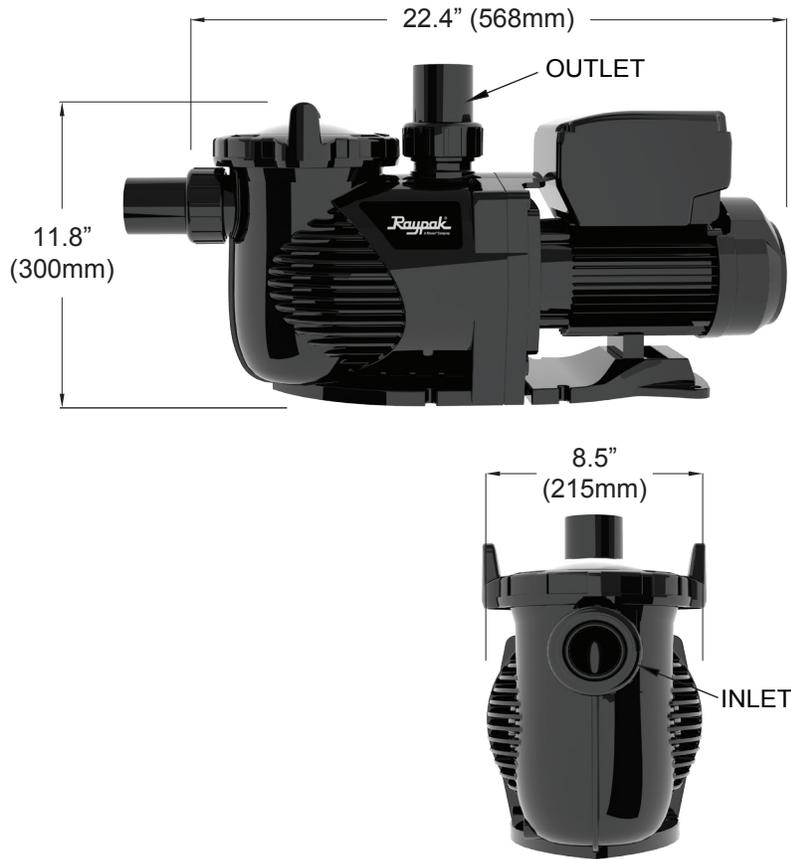

Boost Performance

Protégé products are the perfect companion to our pool heaters. Keeping your system clean and clear of debris helps the performance of your heater and contributes to the health and longevity of your above ground pool system.

Build Your System

Our Protégé Series gives you the most options for building your ideal above ground pool system.

Model	Input Power	Power (HP)	RPM	Voltage/Frequency	Max Load	Connection ID/OD
RPVSP1	1.30kW	1.5	800-3400	220/240V-50/60Hz	5.9-5.4A	1.5"/2"

Indoor and Outdoor Weatherproof Materials

Protégé products are constructed with durable materials that stand up to normal weather conditions and can be installed indoor or outdoor.

Easy to Maintain

Protégé products are designed to make cleaning easy, with large baskets on our pumps and a transparent lid that let's you check the level of trapped debris at a glance.

Easy To Connect

Protégé products are quick and easy to install onto existing above ground pool pads or on new above ground pools. Save even more time and money when installing one of our filter/pump combination systems.
